

Arboriculture, Urban Forestry and Forestry Degree Programs in U.S. Colleges & Universities

While there are probably more than 500 college and university programs in this country and around the world that include some arboriculture and urban forestry components, there are relatively few institutions that offer two- or four-year degrees in arboriculture, urban forestry or forestry. The Tree Care Industry Association has just updated our data on these programs so as to have it available to prospective students as well as employers.

While in the past we have, from time to time, printed the entire list in TCI

Magazine (TCI, March 2007), we now include only part of the list in the print version of the magazine for at least two reasons: the list has grown and takes up more space, and by putting the entire list in the digital version of TCI online and on the TCIA Web site (www.tcia.org), we can provide live links to the many college and university Web sites.

Our list contains the most current information on these programs. Any institution not listed here but which offers these degrees is encouraged to e-mail their information to editor@tcia.org with the

pertinent information.

We are also building a list of non-degree arborist skills and safety training programs. Any organization offering certificate or CEU credit programs for arboriculture or urban forestry skills and safety program should also e-mail that information to editor@tcia.org.

We hope to compile both lists along with other industry education and training information into a Careers in Arboriculture booklet for prospective tree care industry employees later this year.
